EXAMINER'S AMENDMENT

1. The following communication is in response to the Amendment filed 28 August 2009 and to the examiner's amendment authorized on 02 December 2009.

2. Claims 1, 4, 6, 9, and 11-15 are allowed.

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Luminita A. Todor, PhD on 02 December 2009.

The application has been amended as follows:

Please amend claim 6 as follows:

6. (Currently Amended) A payment form discrimination apparatus for recognizing a form which states a payee account number and a payment amount, comprising:

an image reader acquiring an image data of the form by optically reading the form;

a processing unit, which performs searching for the payee account number in the image data at an unknown position in accordance with an account number searching rule, discriminates

Deleted: for

Art Unit: 3693

a type of form corresponding to said payee account number from a document information table that stores account numbers correlated with types of the form, and recovers other data from locations according to the determined type of the form;

wherein said processing unit searches for hyphens in the image data, determines at least one location of a specified hyphen arrangement formed by at least one group among the hyphens, character- recognizes the image data in areas surrounding the at least one location of the specified hyphen arrangement, determines the account number based on the character recognition and matches the account number with account numbers registered in said document information table, the matched account number being the payee account number.

Deleted: detected

Please amend the abstract as follows:

A method for identifying payment forms accurately identifies types of forms without adding special form identification data. A payment form discrimination method for discriminating payment forms which state a payee account number and a payment amount includes a step of acquiring an image of the form, a step of making a search for the payee account number in the image in accordance with an account number searching rule, and a step of discriminating the type of form based on the searched payee account number. Types of forms can be identified accurately and fast without adding special form identification data, because the form identification is performed using easily searchable account numbers.

Reasons for Allowance

4. The following is an examiner's statement of reasons for allowance:

The closest prior art, Krouse et al. U.S. Patent 6,097,834 teaches a transaction processing system which includes generating an optically scanned image of at least a portion of a document containing visual data, recognizing characteristics from the scanned image and comparing sets of reference recognition characteristics (column 12, lines 38-62). Krouse further teaches that the recognition teachings can be used to search for a payee account number in the image (column 12, lines 63 thru column 13, line 11 and column 14, lines 17 thru column 15, line 10 and column 18, lines 31-34).

Another close prior art, Kolling, et al. (hereinafter Kolling) U.S. Patent 6,385,595 teaches the use of OCR on scanned images to acquire the necessary information to present the billing information (column 10, lines 10-34). Kolling further teaches a universal biller file which is a database of biller information and includes a record for each biller in the system (column 14, lines 42-49). Kolling teaches that biller information includes information including information describing the biller company name, address, telephone and contains information that identifies the formats for a customer biller account number that the biller accepts from the customer (column 14, lines 50-67). The account numbers have particular formats including hyphens which recognize the account number as being acceptable (column 14, lines 50-67).

Art Unit: 3693

Regarding claim 1, the prior art fails to teach or suggest a payment form discrimination method that searches by a computer for a payee account number in an image at an unknown position by searching for hyphens in the image data; determining at least one location of a specified hyphen arrangement formed by at least one group among the hyphens detected by said search, character-recognizing the image data in areas surrounding the at least one location of the specified hyphen arrangement; and determining an account number based on the character recognition and matching the account number with account numbers registered in a document information table, the matched account numbers being the payee account number. For this reason, independent claim 1 is deemed allowable over the prior art. Independent claims 6 and 15 are allowed for similar reasons. Claims 4, 9, and 11-14 are allowed based on their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
